

Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application.

Listing of Claims:

1. (Currently Amended) A method of ~~using~~ printing stored digital images transferred from an imaging device, comprising the steps of:
 - a) receiving and storing images from the imaging device ~~in~~ having a memory associated with a computer;
 - b) receiving at least one print control file from the imaging device which indicates a prior intention for printing particular stored images ~~subsequent use of the stored images;~~
 - c) the computer responding to the print control file to create and display a list of printing tasks selectable by a computer user in accordance with the prior intention;
 - d) the computer user selecting at least one of the printing tasks from the list; and
 - e) the computer responding to the user selected printing task(s) to initiate the ~~use~~ printing of images indicated by the selected task(s).
2. (Original) The method of claim 1 wherein the transferred digital images include corresponding thumbnail images.
3. (Original) The method of claim 2 wherein the displayed list of task(s) includes thumbnail images of corresponding digital images.
4. (Currently Amended) The method of claim 3 ~~wherein there are further including the step of receiving at least one email control file from the imaging device which indicates a prior intention for emailing particular stored images, and wherein the computer responds to the email control file to create and display a list of email tasks selectable by the computer user~~ multiple control files, one of which includes the desired number of copies to be printed and which is included in a first task, and another control file which includes at least one email

~~address where digital images are to be sent and is included in a second task, and wherein the user selects either the first or second task to be initiated by the computer.~~

5. (Original) The method of claim 1 further including the step of the user modifying the task prior to step e).

6. (Original) The method of claim 4 further including the step of the user modifying the task prior to step e).

7. (Canceled) A method of using stored digital images transferred from a digital camera, comprising the steps of:

a) receiving and storing digital images and corresponding thumbnail images from the digital camera in a memory associated with a computer;

b) receiving a control file from the digital camera which indicates a prior intention for subsequently making prints of the digital image(s) or sending such image(s) to a remote location;

c) the computer responding to the control file to create a list of tasks selectable by the computer user in accordance with the prior intention;

d) displaying the list of selectable task(s) and the thumbnail images associated with the images to be used for the selected task(s) and a computer user selecting a task; and

e) the computer responding to the user selected task(s) to initiate the use of images indicated by the selected task(s).

8. (Canceled) The method of claim 7 wherein there are multiple control files, one of which includes a desired number of copies to be printed using one of the digital images and which is included in a first task, and another of which includes a remote location where digital images are to be sent and which is included in a second task, and wherein the user selects either the first or second task to be initiated by the computer.

9. (Canceled) The method of claim 7 further including the step of the user modifying the task prior to step e).

10. (Canceled) The method of claim 8 further including the step of the user modifying the task prior to step e).

11. (Currently Amended) A method of using stored images captured by a digital camera, comprising the steps of:

- a) using the digital camera to capture digital images and store such captured digital images in a digital memory;
- b) a user selecting particular digital images and indicating an intention to email ~~plurality of intentions to use~~ such user selected ~~captured~~ particular digital images;
- c) the camera producing ~~a plurality of an email~~ control files ~~in accordance with the user indicated plurality of intentions, the control files~~ including identifiers corresponding to the user selected particular digital images, and storing such email control files in the digital memory;
- d) ~~the a~~ computer receiving the email control files from the digital camera;
- e) the computer responding to the email control files to create a to do list of tasks ~~indicating at least one email task that can be performed at a future time~~ ~~selectable by the computer user in accordance with the plurality of intentions;~~
- f) the computer displaying the to do list of selectable tasks and the computer user selecting one of the email tasks; and
- g) the computer responding to the user selected email task to initiate the emailing of the selected particular use of images indicated ~~identified in the email control file~~ by the selected task.

12. (Currently Amended) The method of claim 11 wherein the email control files ~~include a first control file which includes the desired number of copies of digital images to be printed and which is included in a first task, and a second control file which~~ further includes an email address where digital images

are to be sent ~~and is included in a second task, and the user selecting either the first or second task to be initiated by the computer.~~

13. (Currently Amended) The method of claim 11 wherein the ~~plurality of email control files are~~ is provided by the camera capturing a first set of digital images and producing a first email control file, the computer receiving the first email control file and the first set of digital images from the digital camera, the computer then causing the first email control file and the first set of digital images to be erased from the digital camera, the digital camera subsequently capturing a second set of digital images and producing a second email control file, and the computer receiving the second email control file and the second set of digital images, prior to step f).

14. (Original) The method of claim 12 further including the step of a user modifying the task prior to step g).

15. (Currently Amended) A method of capturing and using stored images captured by a digital camera, comprising the steps of:

- a) using a digital camera to capture digital images and store such captured digital images as digital image files in a digital memory;
- b) the user selecting particular digital images and indicating an intention to ~~use~~ print such captured digital images;
- c) the camera producing a first print control file in accordance with the user indicated intention, and including identifiers corresponding to the user selected particular digital images, and storing such control file in the digital memory, the first print control file being stored separately from the digital image files;
- d) ~~the~~ a computer receiving the first print control file from the digital camera;
- e) the computer responding to the first print control file to create a to do list including indicating at least one printing task that can be performed at a future time selectable by the computer user ~~in accordance with the user indicated intention, wherein the at least one printing task identifies the images identified in the first print control file~~;

f) the computer initiating deletion of the first print control file and the digital images from the digital memory of the digital camera;

g) subsequent to step f), the computer displaying the to do list of selectable printing tasks and the computer user selecting one of the printing tasks provided in to do list; and

h) the computer responding to the user selected printing task to initiate ~~the use of~~ the printing of images indicated by the selected task.

16. (Original) A computer storage product having at least one computer storage medium having instructions stored therein causing one or more computers to perform the method of claim 1.

17. (New) The method of claim 15, further including the steps of:

subsequent to step f, providing the steps of:

i) using a digital camera to capture additional digital images and store such additional captured digital images as digital image files in the digital memory;

ii) the user selecting particular digital images from the additional images and indicating an intention to print such captured digital images;

iii) the camera producing a second print control file in accordance with the user indicated intention in step ii), and including identifiers corresponding to the user selected particular digital images, and storing such second print control file in the digital memory, the second print control file being stored separately from the digital image files; and

iv) the computer receiving the second print control file from the digital camera.

18. (New) The method of claim 17, further including the step of updating the to do list created in step e) so that the to do list includes an second printing task that identifies the images identified in the second print control file.

19. (New) The method of claim 15, wherein step g) further includes modifying the selected printing task to keep from printing least one particular digital image identified in the first print control file.
